INEOS STYROLUTION INTRODUCES POLYPROPYLENE BASED COMPOSITE STYLIGHT® AT JEC WORLD 2019

- NEW PP based composite StyLight® Aesthetic complements existing SAN based StyLight®
- First samples on display at JEC 2019
- Modified PP matrix expected to meet class A Automotive surface specifications

INEOS Styrolution, the global leader in styrenics, announces today the expansion of its family of StyLight® composites. The broadened portfolio will include a new PP (polypropylene) based composites specifically designed for aesthetic applications.

Based on the positive reaction of application designers to INEOS Styrolution's SAN based StyLight® composite, the company has decided to offer them a larger choice of solutions for their new application designs. The new composite based on a modified INEOS PP matrix rounds up the portfolio of INEOS Styrolution's composites giving customers a choice to select the material offering the best properties for their respective needs.

The StyLight® portfolio now ranges from a "standard" PP or SAN glass fiber composite suitable for non-visible structural applications to an aesthetic composite based on a modified PP, up to a SAN based carbon composite for premium aesthetic surfaces.

"PP based StyLight will offer multiple options including a very attractive solution for aesthetic applications. Premium surface made of thermoplastic composite is and will remain the strength of the StyLight brand," comments Pierre Juan, VP Future Business and Innovation. "Like for the SAN based StyLight composites, we see automotive, sports and electronics as the prime markets for the new PP material."

The company announces to collaborate with Neue Materialien Fürth GmbH (NMF) to optimise the new PP based StyLight Aesthetic.

Visitors of the JEC World 2019 in Paris (March 12-14, 2019, Paris-Nord, Villepinte) will have the opportunity to see first samples of the new PP based composite in hall 6 at INEOS Styrolution's booth C55.

About INEOS Styrolution

INEOS Styrolution is the leading global styrenics supplier, with a focus on styrene monomer, polystyrene, ABS Standard and styrenic specialties. With world-class production facilities and more than 85 years of experience, INEOS Styrolution helps its customers succeed by offering the best possible solution, designed to give them a competitive edge in their markets. The company provides styrenic applications for many everyday products across a broad range of industries, including automotive, electronics, household, construction, healthcare, toys/sports/leisure, and packaging. In 2018, sales were at 5.4 billion euros. INEOS Styrolution employs approximately 3,500 people and operates 20 production sites in ten countries.
